☐	Sparge:	77°C	170°F	10min

☐ Raise wort to a boil, prepare first round of hops

Boil Recipe

	Step	Amount	Time Remaining
☐	Cascade	1oz	60 min
☐	Cascade	1oz	30 min
☐	Citra	1oz	15 min
☐	Whirlfloc	1pc	15 min
☐	Galaxy	1oz	14 min
☐	Citra	1oz	5 min
☐	Orange Peel, Sweet	3oz	5 min
☐	Citra	1oz	1 min

Fermentation

Yeast Name	Safale American Ale
ID	US-05
Description	American ale yeast producing well balanced beers with low diacetyl and a very clean, crisp end palate. Forms a firm foam head and presents a very good ability to stay in suspension during fermentation.
Amount	12
Unit	g

Notes

Lifted most of this from Lilburgh and Darryl Wyke on Brewer's Friend. Lots of overlap between them. https://www.brewersfriend.com/homebrew/recipe/view/210070/blood-orange-ipa-clone https://www.brewersfriend.com/homebrew/recipe/view/1047763/blood-orange For the adventurous, we have the option to add in some pureed orange around 1.015 to add an extra fruity kick. Current plan is to rack off into two smaller secondary fermenters around then to compare and contrast fruit-full and fruit-less! If we want to bottle any of this we will want to take a crack at pasteurizing any of the fruited version to keep them from literally exploding.
